

# SCAFFOLDING SAFETY INSPECTION

Scaffolding Case Study

*A platform for success*

The Work at Height Regulations 2005 requires records of weekly scaffold inspections by a qualified person. Keeping records of each inspection are a legal requirement on the scaffold user / hirer. Godiva has established rigorous procedures covering inspecting and decommissioning scaffolding structures.

Godiva manages scaffold inspections by using mobile digital devices based upon cloud technology, this makes recording inspections and sharing reports a timely and reliable process.

Godiva is able to file and send out reports to agreed schedules which means there is no need for paper form and all reports are automatically saved in the cloud on secure servers. Inspection reports can then be emailed to client.

Schedules of which inspections are due, which inspections passed, and crucially any that may fail are documented clearly and follow up actions implemented swiftly to ensure all site scaffolds remain safe and secure. In addition to standard reports video, audio and photographs can be added to keep a record fully traceable.

# SMART Inspector

The professional inspection solution for any scaffolding business

## The SMART Inspector app key features:

- ✓ Plan inspections in advance to improve efficiency
- ✓ No need to fill in paper forms anymore!
- ✓ Simple to use on site, even if there is no mobile signal
- ✓ Capture photos of any defects
- ✓ Allows you to raise unsafe scaffold reports effortlessly
- ✓ Captures customer signatures on site using your device, no chasing around afterwards
- ✓ Automatically schedules inspection reports to be emailed to customers
- ✓ Easy to use web console with clear reports for managers
- ✓ Automatically uploads a record of each inspection to the cloud
- ✓ Runs on Apple and Android tablets and smart phones
- ✓ Prove, at a glance, that all your past inspections were carried out on time and keep the HSE at bay

### Manage your inspections efficiently!

The Work at Height Regulations 2005 requires records of weekly scaffold inspections by a qualified person. The records are a legal requirement on the scaffold user / hirer. Streamlining the process of inspecting and decommissioning scaffolding structures with a new inspection smart phone app based upon the latest cloud technology makes recording inspections and sharing reports simple.

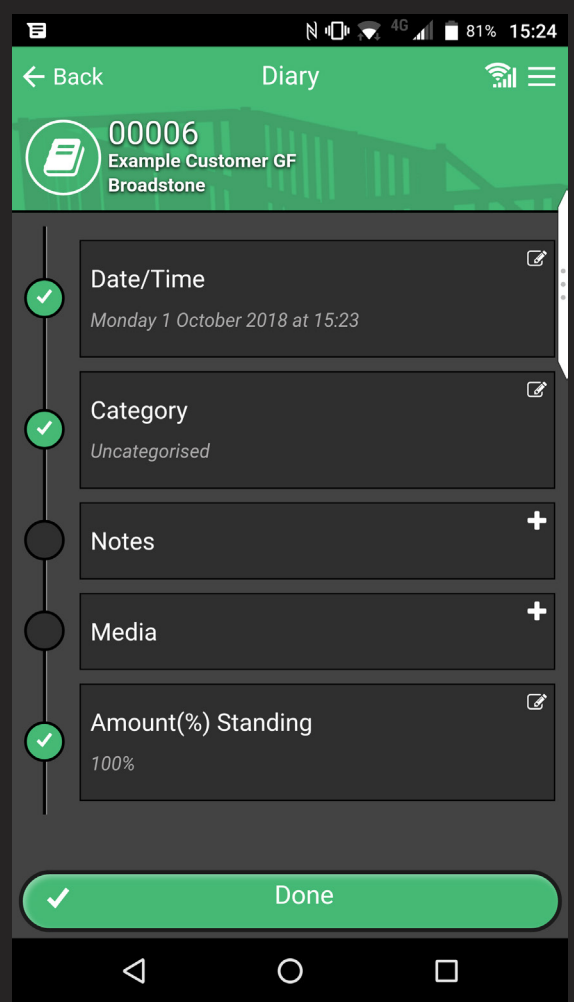

### Save on paperwork

The time and effort it takes to scan, file and send out reports can be dramatically slashed as there's no need for paper forms. No more lost reports as everything is automatically saved in the cloud on secure servers. Retrieving reports couldn't be simpler with our user friendly desktop web console.

### Instant reports

Not only can you set up the system so that each inspection is automatically emailed to your client, you also have instant access to the information. You can see which inspections are due, which inspections passed, and crucially which failed.

There is also a diary function that allows you to record the progress of the scaffold build/dismantle, any problems such as lack of access or a conflict with other works and to show the site is clear when you have completed the job. You can use video, audio, photos of text to keep a record which is accessible back at the office.

SMART Scaffolder is Godiva's digital used to inspect scaffolds and operates across smartphones and tablet devices. A simple step by step process helps to ensure compliance with legislation and can automatically distribute inspection reports with an auditable trail for proof.

## A platform for success

Godiva offers a full turnkey scaffolding service from conception to completion, organising any project from start to finish. Operating 24/7/365 to the highest quality and audited business processes, Godiva can respond quickly and effectively to any UK needs. Godiva employs skilled and rigorously trained engineers, supervisors, advanced scaffolders and scaffolders and demands the highest standards of safety and technical excellence.
